

Dry Electrode Multistage Calendering Solution

Product Overview

- The equipment is used for the production of dry electrodes, and integrates functions such as feeding, film forming, thinning, single-side lamination as well as rewinding and unwinding

Product Features

- Realize the whole process from feeding to continuous production of single-side electrode, and the automatic closed-loop control of tension, roller gap, temperature and pressure

Product Parameters

Mechanical speed	MAX:25m/min
Operation speed	MAX:10m/min
Film thickness	≥70μm
Rolling thickness accuracy	±2μm
Roller width	500mm
Film width	400mm
