

Dry Electrode Total Solution

Product Overview

- The equipment is used for continuous dry electrode making, integrating powder mixing, feeding, film forming, thinning, double-sided lamination, as well as rewinding and unwinding

Product Features

- Realize uniform mixing and material fibrosis of binder through high-speed mixing equipment, and achieve continuous film forming, thinning, and lamination. The tension, roller gap, temperature, and pressure are under automatic closed-loop control, thus ensuring simple operation and high safety, and achieving continuous preparation of dry electrodes

Product Parameters

Mechanical speed	MAX:30m/min
Operation speed	MAX:15m/min
Rolling thickness accuracy	±2μm
Film width	400mm
Roller width	500mm
Pressure	10-50T
